

Appl. No. 09/626,063

In the Claims

1-48. (cancelled)

49. (new) A method of transferring an image to a destination, the method comprising:

5 displaying destination options on a user interface on a standalone scanner;

obtaining a destination from said user interface, wherein said destination is connected to said standalone scanner using a network;

10 scanning an image on said standalone scanner; and transferring said image to said destination.

50. (new) The method of claim 49, wherein said user interface comprises a browser.

51. (new) The method of claim 49, wherein said obtaining said destination comprises detecting a drag and drop operation wherein a first icon is dragged to a location indicator and dropped on said location indicator.

52. (new) The method of claim 51, wherein said first icon comprises a scanner icon.

20 53. (new) The method of claim 49, further comprising automatically converting said image to a different document format before said storing.

Appl. No. 09/626,063

54. (new) An apparatus for controlling an image scanning process in a standalone scanner, comprising:

- a. at least one computer readable medium; and
- b. computer readable program code stored on said at least one computer readable medium, said computer readable program code being automatically executed on said standalone scanner when a first displayed element is dragged to and dropped upon a second displayed element using a user interface on said standalone scanner, said computer readable program code comprising:

- i. program code for establishing a connection between said standalone scanner and a destination location associated with said second displayed element, wherein said standalone scanner is associated with said first displayed element;
- ii. program code for causing said standalone scanner to scan at least one image; and
- iii. program code for transferring said at least one image from said standalone scanner to said destination location.

55. (new) The apparatus of claim 54, wherein said computer readable program code is executed without further user intervention after said first displayed element is dragged to and dropped upon said second displayed element.

56. (new) The apparatus of claim 54, wherein said first displayed element comprises a scanner icon.

57. (new) The apparatus of claim 54, wherein said user interface comprises a browser.

Appl. No. 09/626,063

58. (new) The apparatus of claim 54, said computer readable program code further comprising program code for converting said at least one image to a different document format before said transferring and said storing.

5 59. (new) The apparatus of claim 54, wherein said transferring comprises transferring said at least one image across a File Transfer Protocol (FTP) connection.

60. (new) The apparatus of claim 54, said computer readable program code further comprising program code for determining
10 if said destination storage location is a supported location.

61. (new). A standalone scanner apparatus, comprising:
browser means for obtaining a destination location,
wherein said destination is connected to said standalone scanner by a network;

15 means for automatically causing said standalone scanner to scan at least one image when said destination location is obtained; and

means for automatically transferring said at least one image to said destination location when said scan of said at
20 least one image is complete.

62. (new) A standalone scanner connected to a network, the standalone scanner comprising:

a processor;

a memory coupled to the processor;

25 a browser program stored in the memory for accessing destination locations on the network;

a display for displaying the destination locations; and

a keypad for entering a destination location on the network and for causing the standalone scanner to scan an

Appl. No. 09/626,063

image and automatically send the scanned image to the destination location.

63. (new) The standalone scanner of claim 62 wherein the destination location is a Uniform Resource Locator (URL) address on the World Wide Web.

64. (new) The standalone scanner of claim 62 wherein the network is the internet.

65. (new) The standalone scanner of claim 62 wherein directly connects to a local server via a communication link for sending the scanned image to the local server and then the destination location.

66. (new) The standalone scanner of claim 62 further comprising a plurality different preset destination locations of the network stored in the memory.

67. (new) The standalone scanner of claim 66 wherein the preset destination locations are downloaded from the network to the scanner.

68. (new) The standalone scanner of claim 62 further comprising a network card to establish communication to a remote server on the network.

69. (new) The standalone scanner of claim 62 further comprising a mouse and a keyboard for providing input from a user.

70. (new) The standalone scanner of claim 62 further comprising an automatic document feeder (ADF).

Appl. No. 09/626,063

71. (new) The standalone scanner of claim 62 wherein the display displays a list of available servers as icons that represent available destination locations on the network
